

## Toxic Ingredients in Skincare

Petroleum-By-Products & Mineral Oil	Phthalates	Polyacrylamides
Phenoxyethanol	Formaldehyde	Benzophene
Artificial Colors	Dioxane	Synthetic Fragrances
Talc	Sulfates	Petrolatum
Methylisothiazolinone	Dioxane	Benzalkonium Chloride

And those are very few of the toxic chemicals used in skincare industry

Every time you are purchasing product or product line

Please check ingredient list

You can actually google product for toxic ingredients

By placing product name in google search and writing toxic ingredients next to it

However if skincare line is new

Google will not give you the answer

So you will have to check any unknown to you ingredient yourself by googling that particular ingredient.
